

# CrashPlan for Google Workspace

Secure, scalable data protection  
for your business collaboration tools

**The easiest and most reliable backup for businesses**

You've adopted Google Workspace to enhance collaboration and streamline operations. But what happens when data goes missing through user error, cyber threats, or Google glitches? Like other SaaS apps, Google Workspace operates on a shared responsibility model: they manage uptime and infrastructure, but you're responsible for protecting your data.

Our automatic backup creates a second copy of your Google Workspace data in our encrypted, immutable cloud. With CrashPlan you can break free from Google's limitations on versioning and deleted data retention, so you can meet compliance requirements, protect against ransomware, and enable your employees to restore files and emails efficiently.

## The CrashPlan Data Resiliency Platform Keeps You Running

### ✓ Reduce Risk

Safeguard your organization with secure backups built with a zero-trust approach. Rapidly recover from ransomware, deletion or corruption; reduce legal risk with built-in legal hold; and confidently meet stringent regulatory compliance requirements, including SOX, HIPAA, and GDPR.

### ✓ Increase Productivity

Give employees the power to recover lost emails and files without submitting an IT ticket. With intuitive search and restore tools, users can find and recover exactly what they need on their own – minimizing downtime to stay productive.

### ✓ Maximize Efficiency

CrashPlan helps even the leanest IT teams back up more data with less overhead – so you can apply your limited time and budget to other high-priority IT projects. Compression and block-level deduplication reduce storage needs. Apply policies at scale, streamline user lifecycle tasks, and preserve data for legal holds all from one console.

# Key Features

## Protection from Ransomware

Never again worry about your data being held hostage. With CrashPlan, you can restore your data quickly and easily from a known-good point in time.

## Regulatory Compliance and Governance

CrashPlan helps meet strict data retention and protection requirements like SOX, HIPAA, and GDPR and is audit-ready, with comprehensive reporting and logging.

## Incremental Backups & Versioning

After the initial backup, CrashPlan backs up new data incrementally, conserving storage and bandwidth. Easily locate and restore historical versions using our granular search.

## Policy-Based Controls & Permissions

Efficiently manage backups through flexible, policy-based controls and delegated administration privileges assigned to specific users or teams.

## Security and Privacy

Your data stays secure with strict separation of duties and end-to-end encryption. File and folder name obfuscation and data shredding add additional layers of security.

## eDiscovery and Legal Hold

Rapidly locate and preserve critical data using advanced search tools and streamlined legal hold management, meeting your compliance and litigation obligations without headaches.

## Self-Service Restore

Save your IT team's time by empowering users to independently restore lost files and emails. Or configure CrashPlan to require administrator restores. It's up to you.

## Centralized Data Resiliency

You can also manage backups for your endpoints and servers within the same console. Protect your organization's critical data wherever it lives.

## The Bottom Line

CrashPlan provides cyber-ready data resilience and governance for endpoints, servers, and SaaS apps in a single platform for organizations whose ideas power their growth. Trusted by businesses, universities, and institutions of all sizes worldwide, CrashPlan's comprehensive backup and recovery solutions ensure the safety and compliance of data without disruption, anywhere at any time.
