

CrashPlan for Microsoft 365

Protection for your data in Exchange Online, SharePoint, OneDrive, and Teams

The easiest and most reliable backup for businesses

Complete backup in the cloud with 100% security

With Microsoft 365, you've enabled greater collaboration for your distributed teams and achieved seamless accessibility to important data. That's great, but have you thought about the safety of this data? CrashPlan helps you backup your Microsoft 365 data – Exchange Online, SharePoint, OneDrive, and Teams seamlessly to an alternate cloud target with total security and privacy.

SaaS data backups are an indispensable asset in any IT Administrator's toolkit. Whether it is to achieve regulatory compliance, protect against ransomware, defend against insider threats or just plain recover lost data – a cloud-to-cloud backup is an absolute necessity.

And that's where CrashPlan for Microsoft 365 comes in.

Security, privacy, and confidentiality

CrashPlan's secure container technology not only enables powerful encryption but also enforces a strict separation of duties. It also obfuscates file and folder names completely as well as performs file shredding, before writing backup data to cloud storage targets. With CrashPlan, you know your enterprise data is safe.

Self-service interface

CrashPlan's easy-to-use interface means that users can initiate their own restores without requiring an administrator to get involved. Administrators can control self-service restore permissions, based on the organization's appetite for self-service. Restores can be performed backup to the Microsoft 365 cloud or to their user endpoints for offline access.

End-to-end encryption

Zero-Knowledge Privacy is a tenet that all CrashPlan products are built on. This ensures that your data can be accessed only by you and nobody else – not the cloud vendor, not even us.

Protection from ransomware

CrashPlan is designed to protect you from ransomware attacks by ensuring that a copy of your data is always available to you – safe and secure. In case of an attack, you can simply point back to a point-in-time before the attack, restore your data, and not be held hostage by the attacker

Regulatory compliance and governance

CrashPlan helps organizations achieve regulatory compliance. Regulations like SOX, HIPAA, GDPR, and others have requirements around data protection and retention which CrashPlan can help meet. CrashPlan's reports and audit trail help to keep organizations on a defensible platform when it comes to regulatory compliance.

Historically accurate

CrashPlan enables automatically scheduled backups that ensure that all historical versions of your Microsoft 365 data are safely stored and easily recoverable. Granular restores enable you to get back a single folder, document, email, file, or version of a file, as the case may be.

No Infrastructure Headaches

CrashPlan for Microsoft 365 is a cloud-to-cloud offering, which means no on-premises infrastructure and no impact on your company's network bandwidth for daily backups. Just schedule it and it runs automatically. You have other things to worry about!

Storage vendor agnostic

CrashPlan is storage vendor agnostic and thus allows enterprises to backup data from M365 to any other cloud target easily and avoid vendor lock-in. Choose from Microsoft Azure, Google Drive, Amazon S3, IBM SoftLayer, Google Cloud Platform, etc. Or you may opt for CrashPlan's fully managed and hosted model and relieve yourself of the burden of making these choices!

Incremental backups forever

After CrashPlan performs a full sweep of your M365 data the first time around, it only picks up changes after that. This, combined with our compression and deduplication capabilities goes a long way towards conserving valuable network bandwidth and storage space.

Auditing and reporting

CrashPlan automatically audit-logs all touchpoints in the system and provides several reports which can be scheduled to run automatically or generated automatically. The enterprise-class rigor, combined with granular insights makes backup management a cinch while helping you stay compliant.

Integrated with EntraID

Streamline user experience and management with our EntraID integration. CrashPlan makes it easy to leverage EntraID not just for authentication and SSO but also to provision and de-provision users on an ongoing basis.

Policy-based management

CrashPlan provides policy-based management that allows an administrator to easily control all elements of backup behavior – backup schedules, folders to include/exclude, file types to include/exclude, number of versions to retain, file size limits, user quota limits, etc. Once these parameters are set, all M365 accounts pointed to the policy read these parameters, and change their backup behavior in a couple of hours.

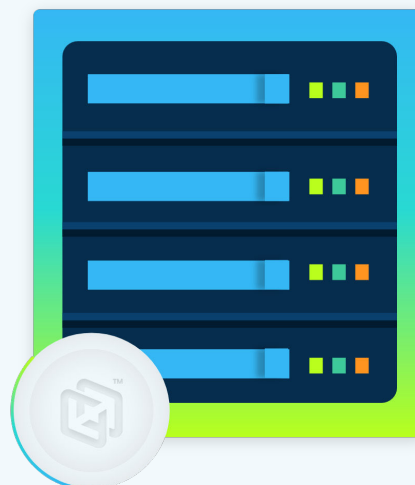

Administrator approved deletion

CrashPlan allows an administrator to delete specific user files, emails, and folders from backup storage. This is critical for GDPR compliance and to satisfy users' "right to be forgotten". All actions are audit-logged for compliance reasons.

Legal hold and eDiscovery features

Easily place users on a legal hold. Powerful search features enable eDiscovery for legal or other needs. Search by filename or keyword. Or, in the case of Exchange Online, search using To:, From:, Subject:, combined with keywords.

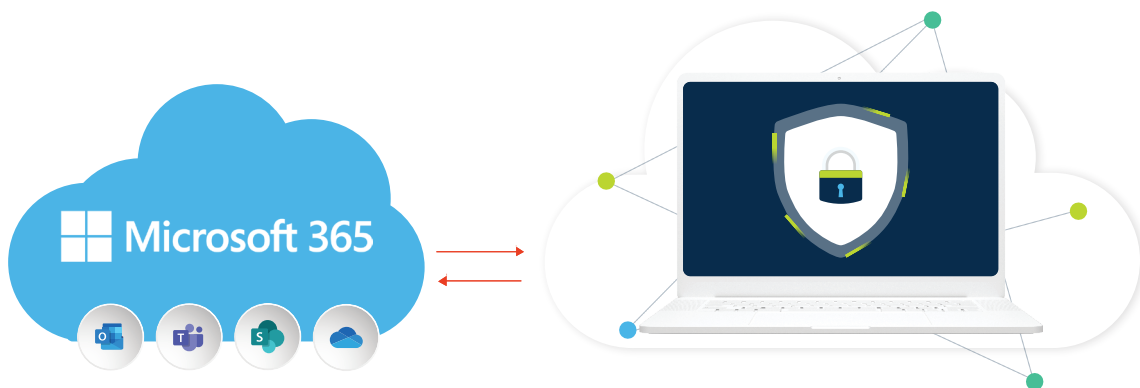

Microsoft 365 Backup Storage

Add Microsoft's lightning-fast disaster recovery option, Microsoft 365 Backup Storage, to your data resiliency arsenal. This seamless integration allows you to rapidly recover your Microsoft 365 assets in the event of catastrophic data loss events like ransomware. Meet aggressive RTOs without breaking a sweat.

When you combine CrashPlan for Microsoft 365's powerful search and granular self-service restore with the large-scale recovery capabilities of Microsoft 365 Backup Storage, you're always prepared for the smallest to the largest data loss incidents.

- ✓ **Data transfer speeds of up to 2TB of data per hour at scale**
- ✓ **Recover one user or thousands of users' assets at once in just a few clicks**
- ✓ **Restore assets in place or to an alternate destination**

The bottom line

CrashPlan provides cyber-ready data resilience and governance in a single platform for organizations whose ideas power their growth. Trusted by businesses, universities, and institutions of all sizes worldwide, CrashPlan's comprehensive backup and recovery solutions ensure the safety and compliance of data without disruption, anywhere at any time.
