CrashPlan for Microsoft 365

Protection for your data
in Exchange Online, Sharepoint,
OneDrive, and Teams

The easiest and most reliable backup for businesses

You've moved your data to Microsoft 365, enabled greater collaboration for your distributed teams, and achieved seamless accessibility to important data. But have you thought about the resiliency of this data? Microsoft operates on a shared responsibility model: they manage uptime and infrastructure, but you're responsible for protecting your data.

That's where CrashPlan comes in.

Our automatic, cloud-to-cloud backup creates a second copy of all your Microsoft 365 data in the location of choice, helping you meet compliance requirements, protect against ransomware, and enable your employees to restore files and emails efficiently.

✅ Reduce Risk

Safeguard your organization with secure backups built with a zero-trust approach. Rapidly recover from ransomware, deletion or corruption; reduce legal risk with built-in legal hold; and confidently meet stringent regulatory compliance requirements, including SOX, HIPAA, and GDPR.

✅ Increase Productivity

Boost productivity for your IT team with an intuitive management console and smooth integrations with authentication, provisioning, and SSO tools. Enable end users to restore their own data and quickly find exactly what they need through advanced search features, reducing user downtime and IT workload.

✅ Maximize Efficiency

Optimize your storage with advanced deduplication, file compression, and customizable retention policies. Our patented backup-to-OneDrive capability gives you the option to securely repurpose the storage you're already paying for with your Microsoft 365 subscription.

Key Features

Protection from Ransomware

Restore data quickly and easily from a point in time before the ransomware attack. Never again worry about your data being held hostage.

Security and Privacy

Your data stays secure with strict separation of duties and end-to-end encryption. File and folder name obfuscation and data shredding add additional layers of security.

Regulatory Compliance and Governance

CrashPlan helps meet strict data retention and protection requirements like SOX, HIPAA, and GDPR and is audit-ready, with comprehensive reporting and logging.

eDiscovery and Legal Hold

Rapidly locate and preserve critical data using advanced search tools and streamlined Legal Hold management, meeting your compliance and litigation obligations without headaches.

Incremental Backups & Versioning

After the initial backup, CrashPlan backs up new data incrementally, conserving storage and bandwidth. Easily locate and restore historical versions using our granular search.
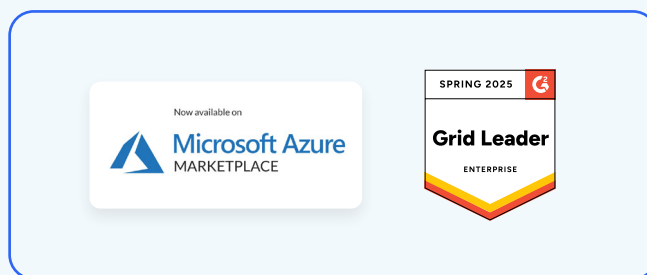

Self-Service Restore

Empower users to independently restore lost files and emails and save time for your IT team. Or configure CrashPlan to require administrator restores. It's up to you.

Policy-Based Controls & Permissions

Efficiently manage backups through flexible, policy-based controls and delegated administration privileges assigned to specific users or teams.

Simplified User Management

Seamlessly integrate with enterprise namespaces such as Entra ID (Azure Active Directory) for provisioning, de-provisioning, and SSO.

Vendor-Agnostic Storage

Backup your Microsoft 365 data to our Azure cloud, choose from other cloud platforms such as Amazon S3, Backblaze, or Google Cloud—or save storage costs with our patented technology that transforms your existing OneDrive space into a secure backup target.
